Art Unit: 2653

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-40, drawn to a load/unload ramp asembly, classified in class 360, subclass 254.7.
 - II. Claims 41-50, drawn to a method of making a ramp assembly, classified in class29, subclass 603.03.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process such as by one that does not require the particular steps of "passing a shaft", "moving said fastener further within" and "deflecting said first base plate attachment cantilever" as required for patentability by invention II.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
